OCCG EMIS Web
Primary Care Services Template v10

What's new in Version 10?

- All Tabs
  - Hyperlinks updated to the new Service Specifications
  - Fees updated
- **Leg Ulcer Compression Rx Tab**
  - The service now calls for reassessment every 6 weeks, and a different payment model for those reviews. The labelling and concepts have been adjusted to reflect this
- DVT Tab
  - The DOAC service is to be continued indefinitely
- LARC Tab
  - Labelling to highlight that [IUD fitted] should only be used for Copper coils (some practices have been habitually using the code because of historical reasons, but we are trying to make it clearer in the record who has had an IUS and who has had an IUD)
  - IUS fitting indications relabelled (some practices hadn't got the hang of how to use them)
  - Addition of follow-up codes and Diary Entry codes for when the LARC should be changed
- Minor Surgery Tab
  - Minor relabelling and tooltips for which injections are and are not commissioned, and commissioning statement links added
  - Consent for Minor Surgery code added

What will this do?

This template contains tabs for ALL of the locally commissioned services from the OCCG and Public Health, and replaces the previous versions that have been released. Each service is spread across one or more Tabs in the Template:

The major difference from previous versions is that ~70 data concepts underneath the template will make the template different each time you use it – you will only be presented with options relevant to your patient. The template will HIDE codes for claiming reviews, if a vital code is missing e.g. the claim code for a melanoma review is hidden unless the patient has a diagnosis of Melanoma within the correct time frame. As a result, you may need to load the template, add a diagnosis and save the data first before re-opening the template in some circumstances. This is to make certain you get the coding right to ensure payment.

What will it do in the future?

We hope to produce further protocols which will support correct data entry to help you maximise payment; there is one connected Protocol Alert available at present for reviewing Time in Therapeutic Range for patients on warfarin.

When EMIS introduces its new Dynamic Templates functionality, this template will be reprogrammed so that it does not need to be closed and re-run in order to reveal hidden codes.

Troubleshooting

The documents in this software deployment kit (SDK) aim to aid and guidance in the installation and activation of this data entry template. We welcome all questions or comments on these or the Template. Please see below for contact details for dealing with any problems.

EMIS Health: phone 0330 0241 270
