

Personalised medicine and risk prediction: Is it going to change my management?

An evening of talks and stimulating discussion
for General Practitioners

Tuesday 11 Feb 2020 19:00 – 21:30

Seminar Room 9, Ruth Deech Building, St Anne's
College, Woodstock Road, Oxford OX2 6HS

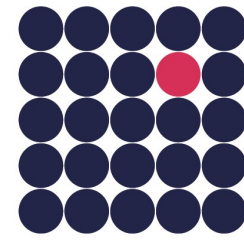

A hot buffet will be served throughout the evening from 19:00

'Personalised', 'precision' and 'stratified' medicine are familiar
buzzwords, but will advancing genomic technology really make a
difference to front line medicine any time soon?

Is personalised medicine that takes account of genetic risk any
better than just knowing your patient?

How can you support your PCN's role in early cancer diagnosis
(Network Contract DES Guidance 2019/20 8.2), and what tools
already exist in EMIS to help with this?

Centre for
Personalised
Medicine

Communicating, engaging, connecting

This evening of talks by academics and clinicians will
explore the hype versus the reality, looking at what's
already happening in primary and secondary care, and
what we can look forward to.

Sceptics welcome!

Professor Sir Peter Donnelly: *Using Genomics to improve
assessment of a patient's risk of common diseases*

Dr Helen Salisbury: *Does knowing about their genetic risk
help patients live a healthier life?*

Dr Eleanor Barry: *Pre-diabetes screening in primary care*

Professor Julia Hippisley-Cox: *QCancer: Using tools already
in EMIS to improve early detection of cancer*
